

200 and 2-3/8 Tournament Hockey Goal Assembly

- 2-Qty- Red Posts (A.)
- 1-Qty Red Crossbar (B.)
- 1-Qty White Tee Bar (C.)
- 2-Qty White Top Shelf Back Halves (D.)
- 2-Qty Base Halves (E.)
- 1-Qty Net, Lacing Cord and Skirt (Not Pictured)

The plastic wrap may be left on until fully assembled

Lay red posts and red crossbar face down on a smooth, flat, non-abrasive surface. Welded wire loops will face up. Insert red crossbar onto each of the red post elbows. Snug bolts after verification the posts are parallel

Loosely assemble the white tee bar's longer end into either end of each base half. All wires should be facing up. Line front of base halves to red post's bottom fittings. Slide on together, best done simultaneously to avoid pinching, some gentle wriggling may be necessary.

Slide each longer end of white top shelf back halves into top of white tee bar. Swing top shelf assembly towards red crossbar, fitting front ends of white top shelf back halves into red post's top fittings. Gently snug up the 6 bolts.

Set goal upright and check for even fit. Adjusting frame and re-tightening bolts may be necessary. Base halves will not necessarily fit completely into red post's fittings. There may be a small gap between wire loops at base. Tighten all bolts after alignment is satisfactory.

IMPORTANT: Attach at 6 Key areas before lacing!

Ziptie at top corners of netting and posts at (A) & bottom corners of netting and posts at (C). Count selvages to find center of netting at top and again at bottom, fasten at (B) and (D)

Selvages = loops of netting

Tie one cord in to two equal halves at center of red crossbar (D), lacing out to corners of goal (A). Wire loops and selvages will not correspond one to one. Use all of the netting evenly across entire crossbar.

Tie one cord in to two equal halves at base (B), lacing out to each red post (C). You may need to pull netting along to reach the post. Stop when cord is finished.

Lastly, tie one cord's end to top of one post, lacing down to base. Allow net to gather at very top and again at the base for uniform appearance. Repeat on other side.

Skirting wraps around bottom, providing protection inside and out, sandwiching the netting and steel. Center the skirting at (B), tying one cord to have two equal lengths lacing out to each post and fasten.
